Dear Colleagues,

We are indignant that BC Health Minister Adrian Dix is demanding that physicians, dentists, nurses, naturopathic doctors, and other health professionals subject themselves to experimental COVID-19 prophylactic injections as a condition of licensure/employment.<sup>1</sup>

This is not the place nor the time to reproduce the overwhelming and increasing evidence that these products neither prevent infection, hospitalization, or death, nor stop transmission.<sup>2</sup> The original trials conducted by Pfizer and other companies are still ongoing,<sup>3</sup> and reports of the serious adverse events upon receiving these injections are continuing to mount.<sup>4,5</sup>

Health professionals were considered perfectly fit to serve Canadians when the currently available COVID-19 “vaccines” did not exist – in fact they were hailed as heroes – yet now these professionals are being coerced into submission, with no public debate, by unscientific, immoral, and illegal policies.

Given the pressure that the pharmaceutical industry is exerting on government officials, medical journals, and professional colleges, and the significant conflicts of interests between Health Canada and this industry,<sup>6</sup> Canadians wonder what is driving the outright violation of our health professionals’ right to informed consent, a right protected by international law to guarantee that atrocities like those that occurred under Nazism would never be repeated.<sup>7</sup>

Please end your unwarranted and unjust demands now. Allow your members to practice their profession freely, as they should in a democratic country. Otherwise, history, if not the law, will eventually judge this affront on their, and our, basic rights and liberties.

Respectfully,

Claudia Chaufan, MD, PhD<sup>8</sup>
